Session 1 Assignment – Introduction to the IT World

1. Name 5 IT job roles and write one line about what each role does.

1. Software Developer: Develops, tests, and maintains software applications.
2. Software Tester: Tests software to identify bugs and ensure that it works correctly.
3. UI/UX Designer: Designs user interfaces and improves the user experience of applications.
4. Data Analyst: Analyzes data to find useful information and support business decisions.
5. AI Engineer: Develops artificial intelligence systems and machine learning applications.

2. List 3 product companies and 3 service companies with one example of work each.

Product-Based Companies

1. Google: Develops products such as Google Search, Gmail, and Google Maps.
2. Microsoft: Develops software products such as Windows and Microsoft Office.
3. Zoho: Develops business software such as Zoho CRM.

Service-Based Companies

1. TCS (Tata Consultancy Services): Provides IT consulting and software development services to clients.
2. Infosys: Provides software development, IT consulting, and digital transformation services.
3. Wipro: Provides IT services, cloud solutions, and technology consulting to businesses.

3. Write the full forms and one-line uses of GitHub, Slack, Jira, IDE, and API.

1. GitHub: GitHub is a platform name, not an official abbreviation. It is used to store, share, and collaborate on code.
2. Slack: Slack is a product name, not an official abbreviation. It is used for team communication and collaboration.
3. Jira: Jira is a product name, not an official abbreviation. It is used to manage projects, tasks, and software bugs.
4. IDE – Integrated Development Environment: It is a software application used to write, run, and debug code.
5. API – Application Programming Interface: It allows different software applications to communicate with each other.

4. Name 5 programming languages and mention one use case for each.

1. Python: Used for artificial intelligence, data analysis, and automation.
2. C: Used for system programming and embedded systems.
3. Java: Used for enterprise applications and Android development.
4. JavaScript: Used to create interactive and dynamic websites.
5. SQL: Used to store, retrieve, and manage data in databases.

5. What is the difference between a developer and a tester? Answer in 2 lines.

A software developer writes and maintains code to build software applications and implement new features.

A software tester checks the application to identify bugs and verify that it meets the required specifications.
