Session 2 – Assignment Answers

1. What are the three main layers of software architecture? Write one line about each.

- User Interface (UI): It is the part of the software through which users interact with the application.
- Business Logic: It contains the rules and processes that determine how the application works.
- Database: It stores, organizes, and manages the application's data.

2. Define client and server in your own words with one real-life example.

- Client: A client is a device or application that sends a request to a server. Example: A web browser such as Google Chrome.
- Server: A server receives client requests, processes them, and sends responses. Example: A web server that sends a webpage to Chrome.

Real-life example: When we open Instagram, the mobile app sends a request to Instagram's server. The server processes the request and sends the posts back to the app.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

Feature	Desktop Apps	Web Apps	Mobile Apps
Platform	Installed on a computer	Accessed through a web browser	Installed on a smartphone or tablet
Example	MS Paint	Google Docs (web version)	WhatsApp mobile app

4. Name any 3 databases and mention whether each is SQL or NoSQL.

Database	Type
MySQL	SQL
PostgreSQL	SQL
MongoDB	NoSQL
